

SEPTEMBER 2011

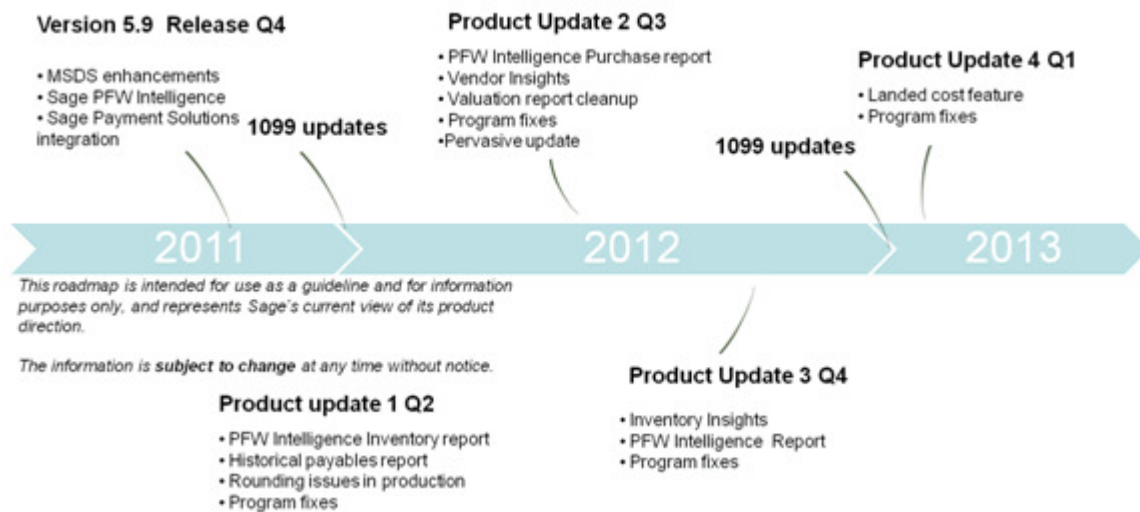

## The Sage PFW Roadmap

Print this article |  Share this article

As a Sage PFW customer we are excited to share with you, the future plans for Sage PFW ERP. The biggest change will be a move away from releases every 12-18 months which will now move to smaller releases in the form of Product Updates every 3-6 months. These product updates will be easier to install and will give you enhancements and program fixes more frequently, increasing the value for your Business Care plans

After receiving valuable feedback from our partners and customers about our future roadmap for Sage PFW ERP we will be changing the format of our version numbers starting with the release of Sage PFW ERP v.5.9. The previous version name for this product was Sage PFW ERP v.2011.

With each release of a product update the number will increment by one decimal for example 5.9.1, 5.9.2. We hope this will make it easier for our customers to know which version they are on and along with the more frequent Product Updates, reinforce the value of your Business Care plans.
